- Remarks : SNx (x=I or T)
- Measurement Condition
- 1. Mesurements shall be made with an oscilloscope with 20MHz bandwidth.
- 2. Outputs shall be bypassed at the connector with a 0.1uF ceramic disk capacitor and a 10uF electrolytic capacitor to simulate system loading.
- Precaution The different output current is applied to the different operating temperature. For example, 12.0V/1.0A is for -20°C to 60°C and 12.0V/1.5A is for 0°C to 40°C. For the applicable safety standards, see the specification sheef.
- 3. Safety certificates were available for the model with 0~40 degrees operation.
  No certificates for the model which operating under -20~60 degrees, but the design can meet safety standard.
